COMPANY PROFILE

Research and innovation have been key drivers of success since the early eighties, when Mazzonetto Spa became Europe's first company to produce electrowelded downpipes. As a result of this technology, production of electrowelded elbows then began in the early nineties.

Specialising in the plumbing sector, Mazzonetto is dedicated to meeting the needs of designers and installers; endeavouring to always develop new products, focusing on increased performance and aesthetics. Vestis and Mavis, by Mazzonetto are complete, high performing collections, suitable for roofing, rainwater goods, cladding, and many other creative architectural applications.

With 30 years' of experience and knowhow, in 2013, Mazzonetto created the first and only multi-metal training seminar in Italy, **PROFESSIONE LATTONERIA**. This seminar assists in supporting the construction industry from concept to completion, by working with architects, builders, manufacturers and installers.

Today, Mazzonetto is a growing company, with branches in Germany, Poland, and an exclusive distribution partner in Australia.

Advantages

EASE OF INSTALLATION

Lightness and ease of use allows excellent workability, even at low temperatures. Vestis H41, at 0.70 mm is malleable, flexible, and maintains high mechanical strength; making it an ideal roofing metal. For cladding and gutter production, Vestis H44, in 0.8 mm - 1.0 mm thicknesses, provides increased durability.

AFFORDABLE

Competitively priced with equivalent metals, Vestis' robust coil coating finish makes for a sound longterm investment.

ECOLOGICAL AND RECYCLABLE

Vestis is atoxic and **100 per cent** recyclable.

UV RESISTANT

Vestis is UV resistant, even on high altitude applications, offering greater longevity compared to similar metal materials.

The trademark "Vestis", identifies a group of pre-painted aluminium materials with specific features intended for roofing, cladding, gutters and roofing accessories.

Vestis withstands atmospheric agents, low temperatures, intense UV rays and harsh marine environments*. These features make Vestis an optimal solution, even in extreme climatic conditions.

Give your projects the exclusivity, uniqueness and performance they deserve, give them Vestis.

*Warranty only provided on marine applications >1km from ocean water.

STUCCO SURFACE

ADVANTAGES

- 1) Minimise surface imperfections.
- 2) Ideal for metal forming around protruding elements.
- 3) Attractive, real textured surface.

COATING FINISH	EXTERNAL ENVIROMENT						
	RURAL	URBAN/ INDUSTRIAL (moderate pollution)	INDUSTRIAL (severe pollution)	MARINE (>3KM)	MARINE (3KM>1KM)	MARINE (<1KM)	STRONG U.V. - over 900 mt altitude
VESTIS							

	40 YEARS WARRANTY
	20 YEARS WARRANTY
	NO WARRANTY

- > *The conditions of warranty should only be considered valid in even-tempered climatic conditions and are not valid in desert or tropical areas. For local clarification, speak with Architectural Metals Australia.*
- > *Vestis meets Europe's A1 (non-combustible material) fire classification.*

TECHNICAL CHARACTERISTICS

Base metal - for gutters and roofing accessories	H44
Base metal - for wall and roof cladding	H41 - H44
Front side A	35 µm
Back side B	25 µm superpolyester
Surface pencil hardness	H
Crack formation during bending	≤ 1,5T free of cracks
Adhesion after bending	≤ 1T peel adhesion
Salt spray test	1500 H
UV resistance	RUV3
Warranty	Up to 40 years
